RhinoGator®

TREAD OPTIONS

Deep Tread * Shallow Tread

Deep tread and shallow tread designs both offer the high performance that has made RhinoGator® the fastest growing pivot tire in the industry:

- * Never goes flat-ever!
- * Ground-gripping tread design for better traction-even over tough terrain
- * Self-cleaning tread design
- * Fits standard pivot wheels
- * Non-directional tread design for optimum performance regardless of pivot direction
- * Sturdy center rib for overall integrity and strength
- * Precision manufactured for consistency and easy assembly
- * No "weather checking" as seen with ordinary rubber tires
- * Industry leading UV protection package
- * 5-year limited warranty
- * Contains corn-based plastic
- * Made in the USA

NEW!
Shallow Tread Option

- * Designed especially for use on light soils
- * Lower tread profile
- * Less soil disturbance & reduced compaction
- * Less slipping

DEEP
TREAD

SHALLOW
TREAD

RhinoGator® is available in two tread profiles to perform best on the soil type in your field.

Its natural habitat is under your pivot.

Deep tread or shallow tread: RhinoGator® is built to perform under your pivots.

The new RhinoGator® Shallow Tread option is especially made for use on light soils, reducing compaction without sacrificing ground-gripping traction.

You can purchase your RhinoGator® tires as a pre-mounted assembly—or order the tires only to mount on your existing wheels.

The self-cleaning tread design on RhinoGator® helps prevent mud from packing in the treads and improves traction across the field.

RhinoGator® is specifically engineered and precision manufactured to stand up to the tough conditions under pivot irrigation.
